Salesforce Project: Real-Time Inventory and Order Management System

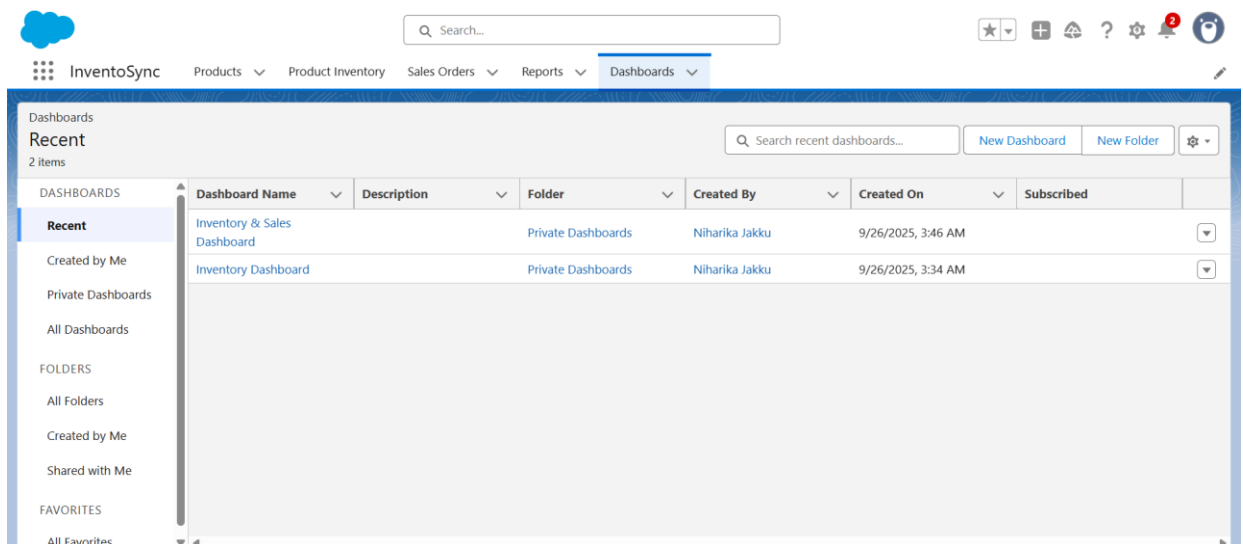

Real-Time Inventory and Order Management: For a small e-commerce or retail business, build a system to manage products, orders and inventory. When a customer places an order, the system should update the available stock count instantly to prevent overselling. This can be achieved with a combination of Flows and Apex Triggers that run on order creation. You could also have a dashboard for the business owner that reflects sales and inventory levels in real-time.

Phase 9: Reporting & Dashboards

- **Reports:**
 - Inventory Report (Products below reorder level).
 - Sales by Customer.
 - Sales by Product.

- **Dashboards:**
 - Real-time inventory levels.
